Tips on Keeping Your Computer Healthy

We hope you are getting a byte or two out of your computer each day. Here are a few tips on prolonging the life of your software.

Clean Your Disk Drives

Cleaning your disk drives takes only a few minutes and makes them work better. Clean your drives every second week.

Get Your Drives Tuned

A majority of disk problems are caused by misaligned disk drives. Your most valued software could be damaged. So protect your investment—get your **drives aligned** and **speed adjusted** at least twice a year at your dealer.

Protect Your Computer's Power

Computers like a steady power supply. However, large appliances or equipment send spikes down a power line. These power spikes cause memory glitches and can alter software if you were writing to the disk when a transient happened. A surge suppressor such as a Blitz Bug will prevent power surges. At $25 to $50, they are a good investment.
